ORGANIC COLLECTION 2015

# LIVE THE LIFE ELECTRIC

Electric Tees produces stand out from the crowd graphic tops and bodies for women aged 18 - 28. Our collection of unique visual graphics is reproduced on tops and bodies designed to fit, flatter to produce pieces that are unique in the market.

Electric Girl - If she were an island she'd be Ibiza, a drink she'd be a shot, an emotion she'd be fun. She's the girl in the sexy tee in the centre of a whirlwind of fun, she gets the look from the boys and girls alike. They all love her; She's utterly ELECTRIC.

Over Branding - Just as our customers stand out from the crowd our brand does also. With a printed Electric asymmetric stripe on the back of our tees our girls look just as hot from behind as they do from the front.

# ELECTRIC TEES AND THE ENVIRONMENT

## **The Environment**

We don't look like your standard Eco aware brand but we are trying hard to be a bit more concious about our Environment

## **Corporate Social Responsibility.**

We're trying to make a fantastic product which comes in at a great price for everyone involved in our business from our suppliers through to our customers. We don't want to make a product that hurts anyone or causes anyone any harm.

## **Materials**

Fabrics - – We're only using organic cotton in our products which we purchase from a business called Fountain Set. They're a large producer who seem to be investing heavily in this area as they know that more and more of their customers are asking for organic and fairtrade products.

## **Manufacturing**

We're using factories in China and Sri Lanka to make our products. Each factory has given us guarantees that they are not using child labour and that their employees have fair wages and conditions. We've also made sure that the factories we use comply with one of the many international inspection and advice schemes. In Sri Lanka the factory we use is certified by SEDEX and in China the factory is certified by ECO-TEX.

## **What have we missed?**

Having an underlying feeling of goodness is what we're about. We're just starting on our Electric journeys. If there is something that we've missed out please let us know.
